**INTEGRATION OF THE DEMAND ORIENTATION METHOD
INTO RETAIL NETWORK PRICING**

Using the demand price elasticity the authors have developed the models for maximization of turnover and gross profit margin for retail location price lines. The optimal prices and price ranges when the sales financial ratios exceed the current levels are determined. The demand orientation method is completed by pricing parametric method. Using the latter it is possible to set the price for each retail location individually. The article introduces the calculated coefficients of price elasticity and optimal prices for product group. The price experiment is carried out to confirm the hypothesis and the conclusion is made.

**THE ANALYSIS OF TOMSK UNIVERSITIES INTEGRATION
INTO INNOVATION ECONOMY UNDER THE CRISIS**

The article has described the levels of universities integration into the innovation economy: state level, Russian business, regional business and world economy, and determines their negative and positive sides. It was ascertained that the state financing of scientific work became the main source for the growth of Tomsk universities financing in 2008–2010. The financing part of Tomsk enterprises decreased considerably. The comparison with the other Russian regions and the regions of Siberian Federal District showed that Tomsk universities have provided the high results in research activity development. However the ratio of financing amount of research activity at Tomsk universities to regional industrial output is still low. Tomsk economy may obtain the main effect only solving the problem of effective coordination between the universities and regional industrial enterprises.

Ardashkin I.B.
THE ONTOLOGIC BASES OF PROBLEM-ORIENTED
RESEARCHES

The ontologic bases of problem-oriented researches are considered. It is ascertained that the problem-oriented process of scientific knowledge is accompanied by two interdependent processes: «object subjectification» and «subject objectification». These processes are virtual. The sphere of virtuality acts the basic ontologic background of problem-oriented researches. It allows considering science as a system of objective knowledge. At the same time the society keeps essential levers of influence on science development.
